Supplementary Course Bibliography

1. Basic papers on Fault-Tolerant Computing

[1] E. Fromentin, M. Raynal, and F. Tronel. On classes of problems in asynchronous distributed systems with process crashes. In *19th International Conference on Distributed Computing Systems (ICDCS)*, pages 470–477, June 1999.

[2] Tushar Deepak Chandra and Sam Toueg. Unreliable failure detectors for asynchronous systems. *Journal of the ACM*, 43(2):225–267, March 1996.

[3] Vassos Hadzilacos and Sam Toueg. Fault-tolerant broadcasts and related problems. In Sape Mullender, editor, *Distributed Systems*, chapter 5, pages 97–145. ACM Press and Addison-Wesley, 1993. Second Edition.

[4] Vassos Hadzilacos and Sam Toueg. A modular approach to fault-tolerant broadcasts and related problems.
Available at http://ftp://ftp.db.toronto.edu/pub/vassos/fault.tolerant.broadcasts.ps.Z.

[5] D. Skeen and M. Stonebraker. A formal model of crash recovery in a distributed system. *IEEE Transactions on Software Engineering*, SE-9 NO.3, May 1983.

[6] I. Keidar and D. Dolev. Increasing the resilience of distributed and replicated database systems. *Journal of Computer and System Sciences special issue with selected papers from ACM SIGACT-SIGMOD Symposium on Principles of Database Systems (PODS) 1995*, 57(3):309–324, December 1998.

[7] R. Guerraoui. Revisiting the relationship between non-blocking atomic commitment and consensus. In Jean-Michel Hélary and Michel Raynal, editors, *9th International Workshop on Distributed Algorithms (WDAG)*, pages 87–100. Springer Verlag, September 1995. LNCS 972.

[8] C. J. Fidge. Logical Time in Distributed Computing Systems. *IEEE Computer*, 24(8):28-33, August, 1991.

[9] Friedemann Mattern. Virtual time and global states of distributed systems. In Michel Cosnard et al., editors, *Parallel and Distributed Algorithms: Proceedings of the International Workshop on Parallel and Distributed Algorithms* (Chateau de Bonas, Gers, France, October, 1988), pages 215–226. North Holland, 1989.

[10] Leslie Lamport. Using time instead of timeout for fault-tolerant distributed systems. *ACM Transactions on Programming Languages and Systems*, 6(2):254–280, April 1984.

[11] F. B. Schneider. Replication management using the state-machine approach. In Sape Mullender, editor, *Distributed Systems*, chapter 7, pages 169–197. ACM Press and Addison-Wesley, 1993. Second Edition.

[12] Mahesh Jayaram and George Varghese. Crash Failures Can Drive Protocols to Arbitrary States. *Proceedings of the Fifteenth Annual ACM Symposium on Principles of Distributed Computing*, pages 247-256, Philadelphia, PA, May, 1996.

2. Group Communication

[1] Y. Amir, G. V. Chockler, D. Dolev, and R. Vitenberg. Efficient state transfer in partitionable environments. In *2nd European Research Seminar on Advances in Distributed Systems (ERSADS'97)*, pages 183–192. BROADCAST (ESPRIT WG 22455), Operating Systems Laboratory, Swiss Federal Institute of Technology, Lausanne, March 1997. Full version available as Technical Report CS98-12, Institute of Computer Science, The Hebrew University, Jerusalem, Israel.
`ftp://ftp.cs.huji.ac.il/users/transis/states.ps.`

[2] T. Anker, D. Dolev, and I. Keidar. Fault tolerant video-on-demand services. In *19th International Conference on Distributed Computing Systems (ICDCS)*, pages 244–252, June 1999.

[3] S. Mishra and G. Pang. Design and implementation of an availability management service. In *19th International Conference on Distributed Computing Systems (ICDCS) Workshop on Middleware*, pages 128–133, June 1999.

[4] Jeremy Sussman and Keith Marzullo. The *bancomat* problem: An example of resource allocation in a partitionable asynchronous system. In *12th International Symposium on DIStributed Computing (DISC'98)*, pages 362-377, Andros, Greece, September 1998. `http://www.cs.ucsd.edu/~sussman/Papers/DISC98.ps`. Full version: Tech Report 98-570 University of California, San Diego Department of Computer Science and Engineering.

[5] R. Vitenberg, I. Keidar, G. V. Chockler, and D. Dolev. Group Communication System Specifications: A Comprehensive Study. Technical report, Institute of Computer Science, The Hebrew University of Jerusalem, Jerusalem, Israel, 1999. In preparation.

[6] Roy Friedman and Robbert van Renesse. Strong and Weak Virtual Synchrony in Horus. TR 95-1537, dept. of Computer Science, Cornell University, August 1995.

[7] I. Keidar and D. Dolev. Efficient message ordering in dynamic networks. In *15th ACM Symposium on Principles of Distributed Computing (PODC)*, pages 68–76, May 1996.

[8] A. Fekete, N. Lynch, and A. Shvartsman. Specifying and using a partitionable group communication service. In *16th ACM Symposium on Principles of Distributed Computing (PODC)*, pages 53–62, August 1997.
`http://theory.lcs.mit.edu/tds/papers/Fekete/VSGC.ps`.

[9] Alan Fekete, Nancy Lynch, and Alex Shvartsman. Specifying and using a partitionable group communication service, 1999. Submitted for publication. Also, MIT Laboratory for Computer Science, Cambridge MA, Technical Memo MIT/LCS/TM-570b.
